Course* = Any component of the curriculum where a grade is earned.

Electives Description

Electives may be either clinical (patient care) or non-clinical (non-patient care) per requirements stated above. Year 3 students must complete three general electives (12 credits), four credits of which must be an ambulatory selective. During the 4th year, students must complete six general electives (24 credits) in fields of their choice. Often these rotations include a variety of specialties and sites – these include international rotations, research electives, “away” rotations at potential residency sites, independent study courses, and more. A wide breadth of electives is available.

Relevant public health adaptations may be implemented to complete electives as directed by the individual course directors as well as the electives directors.

Electives-Specific Learning Objectives

Patient Care Electives

Each patient care elective learning objective listed below has been mapped with relevant competencies, i.e., patient care and procedural skills, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.

1. Perform accurate, focused, and timely histories and physical examinations to inform patient assessment and management during the elective rotation.
2. Interpret diagnostic data to generate prioritized differential diagnoses and propose evidence-informed management plans.
3. Communicate accurate, organized, and concise patient information verbally and in written documentation to members of the health-care team.
4. Apply cost-conscious diagnostic reasoning and management strategies for common conditions within the elective specialty.
5. Integrate evidence from primary and secondary sources to inform patient-centered care within the elective discipline.
6. Demonstrate cultural humility and respect for patient values, beliefs, and preferences in all interactions with patients, families, and care teams.
7. Incorporate feedback to improve performance and demonstrate professionalism through preparation, engagement, and responsiveness.
8. Demonstrate accountability and time-management by completing assigned duties and documentation promptly and reliably.
9. Analyze social and structural factors that influence patient adherence and access to care within the elective context.
10. Collaborate effectively with interprofessional and multidisciplinary teams to coordinate comprehensive, patient-centered care within the elective specialty.

Additional learning objectives as listed in the appropriate elective course description (refer to the [Course Catalog](#)).

Non-Patient Care Electives

Each non-patient care elective learning objective listed below has been mapped with relevant competencies, i.e., medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.

1. Identify knowledge gaps within a defined topic and design a focused plan to address them through research or scholarly inquiry.
2. Critically appraise and synthesize current literature to explain its relevance to the elective's focus area.
3. Locate and evaluate evidence from primary and secondary sources to support conclusions and recommendations within the elective discipline.
4. Generate or disseminate scholarly or quality-improvement products that advance knowledge or practice within the elective discipline.
5. Communicate professionally with course leadership to provide timely progress updates while maintaining appropriate confidentiality.
6. Demonstrate accountability and time-management by completing assigned responsibilities promptly and reliably.
7. Analyze how the elective topic contributes to clinical practice, population health, or societal impact, connecting scholarship to patient and community outcomes.

Additional learning objectives as listed in the appropriate elective course description (refer to the [Course Catalog](#)).

Electives Requirements

Required/Recommended Reading and Resources

Dependent on the individual elective. Each course description in the [Course Catalog](#) will have specific texts listed.

Elective Specific Assessment Process

Formative Assessment

Assessment is the mechanism used to measure progress in learning over a given time. A mid-rotation formative assessment with feedback is strongly suggested for every student. Student progress, achievements, strengths, weaknesses, and areas for improvement should be discussed. If at any point during the elective the student is at risk of not meeting expectations in one or more of the Educational Program Objectives (EPOs), in-person formative feedback with written documentation is required. Any significant deficiencies or concerns should be communicated to the individual course* director and electives director with written documentation that the feedback has been provided to the student. If deficiencies are noted late in the elective, timely feedback will be given. Students may be offered additional assignments to address weaknesses as approved by the individual course director and electives director. The Office of Student Affairs will be notified of any deficiencies or failures.

Additionally, throughout the elective, faculty and residents engaged in student teaching and supervision will provide formative feedback in a variety of formats (e.g., review of progress notes, H&P, direct observation forms, informal verbal feedback, and written narratives, etc.) that may be communicated in writing or verbally. The purpose of this feedback is to identify strengths and opportunities for improvement.

Summative Assessment/Grading

The requirements and specific learning objectives for each individual elective can be found in the [Course Catalog](#). The University of Arizona College of Medicine - Phoenix faculty course director or their COM-P faculty designee will assign a grade based on successful completion of the elective's requirements and overall student performance. For the 4th year students anticipating graduation in AY 26-27 the grading has four tiers: Honors/High Pass/Pass/Fail, with a Incomplete option in certain circumstances as per the [Grading and Progression for Electives Policy](#).

For the students in year 3 anticipating graduation in AY 27-28, starting in AY 26-27, the grading, for all electives that are not required coursework for graduation, will be in two tiers: Pass/Fail, with a temporary Incomplete option in certain circumstances as per COM-P policy

All selectives (e.g. Ambulatory Selective, Emergency Medicine Selective) that are required coursework for graduation, the grading will continue to have four tiers: Honors/High Pass/Pass/Fail, with a temporary Incomplete option in certain circumstances as per COM-P policy

Students are graded on four evaluation criteria:

1. Does not meet expectations
2. Almost meets expectations
3. Meets expectations
4. Exceeds expectations

Please see section B of this syllabus for additional information about grading.

Additional Electives Information

Overview of Year 3 Curriculum

Students must complete 12 credits of electives with 4 credits meeting the ambulatory selective criteria. See [Course Catalog](#) for electives that qualify for ambulatory selective requirement and see [Years 3 and 4 Credit Requirement Policy](#) for more information. Requests for discretionary time or deferral of the patient care ambulatory selective to Year 4 must be

approved as per the [Student Resources Website](#). Research electives and Independent Study electives must be approved as per the linked process in the [Student Resources Website](#). Non-patient care electives are limited to 4 weeks in the year 3. Specific information regarding discretionary time or non-patient care electives can be found in the [Years 3 and 4 Credit Requirement Policy](#).

Overview of Year 4 Curriculum

Students must complete 24 credits/weeks of general electives in fields of their choice – these 24 credits are typically divided into six distinct four-week electives. Often these elective rotations include international rotations, research electives, “away” rotations at potential residency sites, independent study courses, and more. “Away” rotations are defined as rotations offered by non-University of Arizona College of Medicine - Phoenix Faculty and are typically utilized by students as “interview rotations”. Electives offered at sites of our clinical partners with University of Arizona College of Medicine - Phoenix Faculty are not considered an “away” elective even though there is often an application process. Many students also use these general electives to rotate through specialties they may not have the chance to explore again once they enter residency, or in fields complementary to their chosen specialty. Finally, all students take discretionary time to study for their Step 2 USMLE exam, as well as to travel to interviews for residency.

General electives for years 3 and 4 are divided into patient care electives and non-patient care electives.

Patient Care Electives

General Description

A clinical (patient care) elective is a structured learning experience in a field of medicine or related fields approved by the faculty at COM-P that is not specifically required as part of the traditional medical school curriculum and that has as a prerequisite completion of all the year 3 clerkships. Clinical electives involve direct patient care or activities that actively impact patient care.

The student should be an integral member of the team as possible. While it is understood that the student role in managing complex patients and in decision-making may be limited, particularly in some medical subspecialties, we encourage faculty to involve the student as much as possible. For example, students are expected to take initial histories, complete physical exams, interview patients, assist with procedures, and more.

Student Responsibilities

- To participate fully and actively in all the activities of the team.
- To work up and follow patients as assigned by supervisors.
- To pre-round on all their patients before management rounds.
- To present their patients on rounds.
- To write daily progress notes in the SOAP format on all patients assigned to them.
- To demonstrate appropriate patient management under supervising house staff and/or faculty
- To have all orders that they write co-signed by the supervising house staff or faculty.

Faculty Attending Role

The individual course director or supervising faculty should meet with students at the beginning of the rotation to review the goals of the course and expectations. Over the course of the rotation, the attending should listen to the students’ presentations, review write-ups and progress notes, and provide feedback to students regarding their performance. The student should meet with their attending at the midpoint for feedback and at the end of the experience for feedback and assessment.

Non-Patient Care Electives

General Description

Non-patient care electives include research and independent study/reading experiences as well as electives focused on the development of certain capabilities, such as teaching and/or leadership. Specific information for non-patient care electives can be found in individual course descriptions. It is equally important in these rotations that supervising faculty meet with

students frequently to assess progress on required activities during the course. Similar to patient care courses, supervising faculty are expected to complete student assessments based on the core competencies at the end of the course. The maximum number of non-patient care weeks for which credit will be allowed is eight.

Research Electives

Research electives are a non-clinical experience. They are intended to involve the student in a significant role in the performance of a rigorous research initiative. All research elective proposals must include a detailed “syllabus” or “mini-prospectus” that includes a description of the project, the student’s role in the project, the mentor, the mentoring plan, specific time commitment and involvement, and the work product expected at the end of the rotation. Students are expected to determine the specific institutional requirements for their project (e.g., IRB application, lab safety courses, CITI training, etc.) and make sure they are fulfilled prior to beginning the rotation. Students must submit a non-standard course form and research syllabus for each research rotation and work with contracting to assure that a contract covering research rotations at the site of interest is in place. Students must receive prior approval of the rotation and content as per the linked process outlined in the [Student Resources Website](#).

Independent Study Electives

Independent study electives can be a patient care or non-patient care experience and must significantly differ from “away” rotations, external electives, and any existing electives offered in the course catalog, [Course Catalog](#). They are intended to be supervised, intensive investigations of a particular topic/field. All Independent study electives will be developed with a University of Arizona College of Medicine - Phoenix faculty mentor. Independent study elective proposals must provide a detailed syllabus and plan for student mentoring, with specific guidelines on the final output/product. The length of the required paper (if the literature review option is chosen), and schedule of meetings with the faculty mentor for discussions and guidance should be detailed in the proposal. Students must receive prior approval of the rotation and content as per the linked process outlined in the [Student Resources Website](#). Out of state patient care independent study electives will not be approved.

Other Non-Patient Care Electives

These electives focus on development of certain capabilities, such as teaching, leadership, health advocacy, etc., which are important to the development of future physicians. Specific details may be found within the individual course descriptions listed in the [Course Catalog](#).

Section B – Electives Policy and General Resources

General Information

A total of 24 elective credits (typically six courses/rotations) are required. A maximum of 16 credits are permitted in one subspecialty field, and a maximum of 16 credits are permitted at institutions/sites not directly supervised by COM-P faculty. Students may take a maximum of eight credits of non-patient care courses. See [Years 3 and 4 Credit Requirement Policy](#) for additional information.

Students are responsible for their own transportation to and from, and parking fees at clinical sites as indicated in the [Clinical Site Placement and Transportation Policy](#).

Learning Environment Office

The [Learning Environment Office](#) (LEO) provides guidance, support, and information to students on professionalism issues and challenges they may face in the learning environment. The LEO supports students in the development of strong, positive professional practices with peers, faculty, patients and the broader community through effective communication and conflict management.

- Have a question or are unsure how the LEO process works, call or text (602) 827-2328.
- Professionalism concerns may be reported directly to the course* director, the LEO liaisons or in the student evaluations of the clerkship, site, and faculty, which links to the LEO form.
- The [Learning Environment Feedback Form](#) is an online mechanism for students to report any concerns, including those about supervision, across the four-year curriculum. This mechanism ensures confidentiality and is collected directly by the LEO and allows the student to track their report through the process to action.
- A professionalism lanyard card with a LEO QR code for direct, real-time reporting of exemplary examples of professionalism or concerning professionalism/mistreatment behaviors has been distributed to each student.

COM-P is committed to creating and maintaining an environment free of discrimination, harassment, and retaliation that is unlawful or prohibited by university policy. Please see the [Reporting Mistreatment or Harassment of Medical Students Policy](#) and [Anti-Harassment and Nondiscrimination Policy](#) for additional information. In addition, professional attributes are expected of all students. These attributes are within the [Teacher Learner Compact Policy](#).

Website and contact information for the Learning Environment Office can be located [here](#).

Educational Program Objectives

The Educational Program Objectives (EPO) comprise competencies and the measurable objectives by which attainment of each competency can be assessed. The full text of the COM-P educational program objectives can be accessed in the [Educational Program Objectives Policy](#) and requires dissemination as noted in the [Orientation to EPOs and Curricular Unit Objectives Policy](#).

In addition to EPOs, the electives objectives are closely tied to student learning outcomes. COM-P measures these outcomes both quantitatively (via National Board of Medical Examiners [NBME] shelf exams) and qualitatively (via behavioral competency assessments).

Attendance Requirements

All elective experiences are mandatory, and any absence must be recorded via the absence tracking system. To submit an absence request, please use Formsite. All absences will be remediated as deemed appropriate by the clerkship director. Please see section B for College of Medicine-Phoenix (COM-P) attendance policies.

Remediation of absences will be determined in consultation with the electives director and individual course director. Please see the following policies for additional information:

- [Years 3 and 4 Coursework and Examination Absence Policy](#)
- [Leave of Absence and Withdrawal from Medical School Policy](#)

Assessment Process

Formative Assessments

Throughout the electives, faculty (including nurse practitioners and physician assistants with faculty title), fellows, and residents engaged in student teaching and supervision will provide formative feedback in a variety of formats (e.g., review of progress notes, H&P, direct observation forms, informal feedback and narratives, PRIME+ form, NCAT, etc.) that may be communicated by writing or verbally. The purpose of this feedback is to help students identify strengths and opportunities for improvement. Students should proactively request formative feedback on a regular basis and the required frequency for written formative feedback is outlined in the elective specific section of each syllabus.

Any significant deficiencies or concerns should be communicated by the faculty to the electives and the individual course director with written documentation that the feedback has been provided to the student. If deficiencies or problematic issues are noted late in the elective, timely feedback will be given by an assessor to offer the student the opportunity to improve. This should occur prior to assigning a score of “does not meet expectations” on an EPO, when possible. The electives director maintains the ability to assign a summative Level 1 for an egregious action even late in electives.

Mid-rotation Formative Assessment/Feedback

If the student is at risk of not meeting expectations (in one or more of the EPO's) written documentation is required by the student's supervising physician/faculty member.

Summative Assessment

COM-P has internal deadlines for the summative assessment forms to make sure electives grades are reported in a timely fashion, which is consistent with the 6-week requirement used in clerkships. End of rotation (EOR) forms are to be completed by faculty within two weeks of the rotation ending. This will allow for the individual course director and/or the designee to complete the final grades as close to the four-week mark as possible. The student final assessment and grade form should be available to be viewed by students in one45 six weeks after the end of the elective. (Exceptions to the six-week reporting may apply in the case of electives.)

What to do if an assessor is not listed in one45

Contact the COM-P coordinator, (PBC-Evaluation@email.arizona.edu) and electives director.

Conflict of Interest

It should be noted that faculty at COM-P who are family members of the student, have a personal relationship with the student or are/have been health service providers of the student, may not be involved in the academic assessment or promotion of the medical student as described in the [Conflict of Interest - Physician - Student Personal Relationship Policy](#) and the [Conflict of Interest - Physician-Student Health Services Relationship Policy](#).

Standardized Grading Process

The final electives grade will be divided into four categories: Honors, High Pass, Pass, or Fail (H, HP, P, F). Details regarding grading in electives are included in the [Grading and Progression for Electives Policy](#).

Calculating the Final Grade

The individual course director for each elective is ultimately responsible for determining each student's final grade.

The final elective grade will be determined by the individual course director and/or their designee by assessment of performance in Educational Program Objectives (EPO) within the six core behavioral competencies:

- Medical knowledge
- Professionalism
- Interpersonal and communication skills
- Patient care and procedural skills
- Systems-based practice
- Practice-based learning and improvement

(The patient care and procedural skills competency will not be assessed in the non-patient care electives.)

Additional Grading Criteria

Student assessments and the final grade are based on observable behaviors within the EPOs as listed on each of the elective student assessment forms (both patient care & non-patient care). The Individual course director, at their discretion, may require students to perform other educational activities that will contribute to their final grade. For example, there may be an exam on material covered during the elective, students may be required to present a topic to the individual course director and/or designee, or may be required to produce a paper on a particular topic. Requirements such as these should be clearly described and identified to students at the start of the elective.

All behavioral competency data from submitted summative electives student assessment forms for each student will be compiled by the Office of Assessment and Evaluation and presented to the Office of Student Affairs to be included as part of the holistic review with the student each year. Cumulative level ratings are retained throughout the student's enrollment (see [Competency Assessment Policy](#) for additional information).

Providing feedback to the student by an assessor (individual course director and/or designee) regarding any problematic behavior and giving the student the opportunity to improve should occur prior to assigning a score of "does not meet" on an EPO. If a critical event occurs late in the elective, timely feedback will be given and there may or may not be time to demonstrate improvement.

Narrative Feedback

The elective student assessment form (either the "[Patient Care](#)" or "[Non-Patient Care](#)" form, depending on the individual elective) will be completed by the individual course director and/or designee. This form includes two separate areas in which to include narrative feedback. The first area includes formative comments meant to help optimize student performance; the second includes formalized summative comments which will be included in the dean's letter (Medical Student Performance Evaluation [MSPE]). Students are not permitted to pick specific comments to be included or excluded in their narrative grade form. Students do not grade or summarize their own performance. Any concerns regarding narrative comments may be addressed to the electives director or to the dean, student affairs/or designee. (See the [Student Progress Committee Procedures and Process for Dismissal Policy](#) for more information.)

Required Student Evaluation

Assigned student evaluation of the electives is required. The student must complete evaluations online in the required time frame. All comments will be expected to utilize constructive feedback using the W3 model and must contain references and comments to specific behaviors and/or events (positive or negative).

If the student does not complete the required assigned evaluations within one week after the end of the elective, the student will be assigned a formative Level 1 in professionalism for the EPO targeting giving and receiving constructive feedback and will be required to submit the missing evaluation data in narrative form within the second week after the elective.

Once the student has successfully submitted their evaluation in narrative form within the second week, the student will have successfully demonstrated meeting expectations in professionalism.

If the student has not successfully submitted their evaluation in narrative form within the second week after the elective the student will be considered as having not met expectations and a summative Level 1 rating in professionalism for the EPO targeting giving and receiving constructive feedback, will be automatically assigned. The Office of Assessment and Evaluation will track and report to the electives director. For more information, see the [Assessment and Evaluation of Students, Faculty and Curriculum Policy](#).

Additional Resources

Rural Health Professions Program

Students scheduled for rural rotations must complete required documents and attend a rural rotation orientation.

Housing expenses are supported by the rural health professions program (RHPP) and funded by [Arizona Area Health Education Centers](#) (AzaHEC). Students are responsible for damages and incidental charges. Housing options vary depending on rotation location. In most cases, it is pre-arranged by RHPP staff, in others, the preceptor or health center hosting the student provides housing (occasionally in the home of the faculty). Occasionally, students are asked to make their own arrangements. Housing options, at times, are limited and may require sharing common areas and bathrooms with other students. Individualized accommodation requests cannot be guaranteed; therefore flexibility and a resilient attitude is key to having a great experience. Once housing has been secured, changes are generally not allowed less than six weeks prior to the rotation. In addition to housing, AzaHEC also funds one round trip to and from the rural site and a small stipend applied to the student's bursar's account.

Contact Information: Director, RHPP - Jonathan Cartsonis, MD
Email: jcartsonis@arizona.edu, Phone: 602-684-0598

Urgent/Emergent Health Care Services

On-Campus and in the Immediate Phoenix Area

Students can access the list of local healthcare services on the [COM-P website](#). Students are given a rectangular card that contains a list of emergency contact numbers and local healthcare service addresses and phone numbers. This card is placed in their identification holder along with their COM-P identification to allow easy access to healthcare information while at instructional sites. All information is accessible on the wellness website at <https://phoenixmed.arizona.edu/wellness>.

For a list of emergency contact numbers please visit the COM-P website at the following link: [Security - Emergency Numbers](#).

Off-Campus Outside of the Metro Phoenix Area

Students who are in need of urgent/emergent healthcare services, or other healthcare services, while on a remote/rural rotation can find healthcare resources on the [Course Catalog](#). Students may also contact the dean, student affairs or dean, clinical curriculum/or designees.

All sites are assessed for student safety. Details of this assessment are included in the [Training Site Safety Policy](#).

Faculty shall not provide health services for students if they are directly involved in the assessment of the students; however, in the event of an emergency, faculty should perform services to stabilize a student until the appropriate transfer of care can occur. Please see the [Conflict of Interest - Physician-Student Health Services Relationship Policy](#).

COM-P requires that all students have an updated immunization record. Please see the [Immunization and Health Screening Policy](#) for details regarding the contents of the record.

In the event of any exposure to blood/bodily fluids through needle stick, inhalation, mucus membrane or skin exposure, or percutaneously, students must follow the required procedures as indicated in the [Student Exposure to Potentially Infectious Agents and/or Hazardous Materials Policy](#), with steps on the student occupational exposure procedure card.

Expectations for Mobile Communication

The student must always be reachable during usual extended work and on-call hours, and if in a clinical setting, the student should respond within 15 minutes. Most students opt to provide their mobile number for texts; however, the pager and/or voice capability of the cell phone must be functional and available i.e., on the student's person for calls/pages daily. Not responding to calls or pages will be viewed as a deficit in *interpersonal skills and communication*, as well as *professionalism*. Students who are unable or unwilling to utilize their personal mobile device while in their clinical rotation should reach out to the Associate Dean of Student Affairs to discuss alternatives.

Accessibility and Accommodations

The University of Arizona strives to make learning experiences as accessible as possible. If there is anticipation or experience of barriers based on disability or pregnancy, please contact the disability resource center (520-621-3268, <https://drc.arizona.edu/>) to establish reasonable accommodations.

one45: Curriculum Management System

one45 is the curricular management system used to manage evaluations, EOR assessments, final grade forms, and to access learning materials and schedules. General information about the electives, such as syllabi, site information, learning objectives, materials for didactic sessions, links, etc. will be attached as handouts under handouts and links within one45. one45 can be accessed at the web address: [one45](#)

Assessments are collected via one45, and automatic emails are sent to attendings with instructions and reminders to complete. A list of pending and completed assessments can be reviewed in one45, if applicable.

OASIS: Course Schedule

COM-P uses a web-based scheduling system, OASIS. OASIS maintains site information, student schedules, course catalog, and various other details that are pertinent to the clinical rotations. OASIS has detailed, up-to-the-minute course information and allows students to request schedule changes. All students will use this resource for any scheduling purpose throughout their 3rd and 4th year of clinical rotations. OASIS can be accessed on the web address: [OASIS](#)

Course Catalog

The Course Catalog provides course descriptions, location, first day reporting, and contact information for site directors and site coordinators. Students should utilize this resource at least two weeks prior to the start of a rotation for site instructions and expectation. The Course Catalog can be accessed on the web address: [Course Catalog](#)

Student Use of University Sponsored Educational Material

Statement of copyrighted materials: All lecture notes, lectures, study guides and other course materials (besides the required reading) disseminated by the instructor to the students, whether in class or online, are original materials and reflect the intellectual property of the instructor or author of those works. All readings, study guides, lecture notes and handouts are intended for individual use by students. These materials may not be distributed or reproduced for commercial purposes without the express consent of the instructor. Students who sell or distribute these materials for any use other than their own are in violation of the [Arizona Board of Regents Intellectual Property Policy](#). Violations of the instructors' copyright may result in course sanctions and violate the Code of Academic Integrity.

Student Code of Conduct

Medical students are required to follow the policies and codes of conduct governing all students at the University of Arizona. In addition, medical students are also bound by the COM-P [Honor Code Policy and Committee Procedures and Process for Dismissal](#) and the ABOR Student Code of Conduct.

COM-P recognizes the existence of generative artificial intelligence (AI) tools (e.g., ChatGPT & Grammarly) and the

educational benefits they can provide when used ethically. It is imperative any use of generative AI is appropriately disclosed and referenced (e.g., APA, Chicago, MLA). Use of generative AI without citation is considered a form of plagiarism and therefore a breach of Academic Integrity. Students are advised to review assignment instructions for specific guidelines concerning the use of generative AI.

COM-P requires medical students to abide by the professional standards required of physicians under Arizona law students must also abide by A.R.S 32-1401, et.seq. which can be accessed at: <http://www.azleg.gov/arsDetail/?title=32>
